It offers an excellent environment for the growth of new cells and healing. ✓ Phytosphingosine: By acting as a precursor of ceramide which creates a protective layer for stratum corneum of skin, it prevents skin from moisture-loss and helps skin to maintain its homeostasis. It also strengthens skin structure and improves skin firmness by inhibiting the production of collagen-breakdown enzyme, MMP-1. ✓ Hamamelis Virginiana (Witch Hazel) Extract: It is a strong anti-oxidant and astringent. It helps reduce flaking and restores the suppleness of skin. ✓ Aloe Barbadensis Leaf Extract: It is well known for its cooling properties. It helps with wounds, acne, pimples, and rosacea. ✓ Phytolex SC: It comfortably relieves skin irritation and inflammation. (Complex of Phaseolus Radiatus Extract, Betula Platyphylla Japonica Bark Extract, Rumex Crispus Root Extract) ✓ Lactobacillus/Pumpkin Ferment Extract : It has phytochemicals and proteolytic fractions by fermentation. It Has exfoliation, smoothing and softening effects. It shows uncommonly mild irritation unlike most proteolytic materials or traditional enzymes. ✓ Beta-Glucan: It penetrates deep into the skin and has anti-inflammatory effects. It promotes collagen production.</p>

## [Special treatment]

### ■ EyeCell EYE ZONE CARE SYSTEM

EyeCell is an eye zone care range containing botanical stem cell extracts and bio-peptides which can improve dark circles, eye bag, fine lines and wrinkles.

Around the eye skin has very thin and sensitive skin tissues, accordingly it is very difficult to care the eye area.

And the skin around the eyes does more actions than any other parts and makes a lot of expressions. Due to these characters of around the eyes, we can have easily fine lines and wrinkles on this area.

In addition, the periorbital area or the area around eyes is composed of small capillaries and blood vessels. These blood vessels are really small that red blood cells can possibly break in half and stand in line just to be able to get through them. There are even times when blood leaks because of these tiny capillaries.

The process by which the blood leaks is called oxidization or hemoglobin degradation. Hemoglobin is the element that provides red blood cells their colors. When hemoglobin breaks up into tinier elements, hemoglobin degradation happens and it becomes dark and bluish in color.

These infra-orbital shadows or "dark circles" under the eye area caused by an accumulation of hemoglobin and colored degradation products (biliverdin, bilirubin and iron) in the dermis and epidermis can be effectively improved by EyeCell treatment. Special anti-dark circle complex contains chrysin which stimulates the enzyme (UGT1A1) leading to the clearance of bilirubin and N-Hydroxysuccinimide which makes the iron soluble, allowing it to be eliminated.

EyeCell treatment fixes up the disadvantages of the existing therapies and cosmetics.

### ■ ND Cell - Neck & Decollete Treatment

Beautiful neck and decollete line is a symbol of femininity and wrinkleless neck and decollete is a symbol of youth. As women age, face and neck/ decollete get more wrinkles. However, for facial wrinkles, there are relatively various treatment methods such as BontA, fillers, lasers and peelings to diminish appearance of wrinkles. On the neck and decollete area, it is more limited to treat than facial area because the tissue is more fragile than facial one. To treat the neck and decollete effectively and naturally, GENOSYS introduces a special treatment range for neck and decollete.
