GENOSYS Bio-Meso PDRN Expert Treatment Guide

What is Spicule?

Spicules are microscopic needle-like structures, derived from freshwater sponges. When applied topically, spicules create microchannels in the stratum without causing visible injury. Spicules also trigger a mild inflammatory response, which can stimulate collagen production and improve skin texture. Spicule treatment is also called as liquid microneedling or bio microneedling because the treatment has a very similar effect as microneedling treatment. Spicules, once applied in the skin, remain embedded in the skin for approximately 24 to 72 hours. During this time, they gradually break down through natural epidermal shedding and immune system response.

Key Functions:

Micro-exfoliates and stimulates skin renewal

Promotes fibroblast activity and collagen synthesis

Enhances penetration of bioactive ingredients like PDRN and peptides

Encourages smooth, refined skin texture

Clinical Advantage:

Unlike chemical peels or laser treatments, spicule therapy causes no downtime, allowing immediate return to normal activities.

Skin Regeneration Timeline:

Day 1-2	Mild redness or tingling sensation; spicules stimulate micro-circulation and cell metabolism.
Day 3-5	Skin turnover accelerates; keratinocytes renew and flaking may occur.
Day 6-10	Skin appears smoother, brighter, and more even.
Day 11-15	Collagen synthesis increases; firmness and elasticity improve.

What is special about GENOSYS Bio-Meso PDRN Expert Ampoule 60000?

- A specialized treatment, enriched with the uniquely formulated BIO-MESO™ PDRN, panthenol, and an anti-aging complex to regenerate skin and strengthen the skin barrier.
- Contains a significantly higher concentration of spicules compared to other products on the market, delivering more intensive results.
- Spicule numbers per 1ml – 300,000 ~360,000ea
– Total spicule number of the syringe for 1 application :
0.9million – 1.08 million ea
- Functions as a spicule peeling, bio microneedling or bio-meso peeling treatment, inducing a peel-off effect on the skin.

Effects of Bio-Meso PDRN

Boosts skin turnover

Enhances collagen & elastin production

Promotes skin regeneration

Improves skin tone

Improves blemishes

Treatments

Contraindications

Contraindications of spicule treatment include conditions where the skin barrier is compromised or the body may react adversely to stimulation.

Spicule treatments should be avoided or used with caution in the following situations:

1. Active skin infections
2. Severe acne or rosacea
3. Open wounds or broken skin
4. Skin allergies or hypersensitivity
5. Autoimmune skin disorders
6. Recent dermatological procedures :
wait until the skin has fully recovered (usually 2-4 weeks).
7. Use of retinoids or strong acids

Safer Recommendation:

- Stop using retinoids at least 7-14 days before receiving a professional-grade spicule treatment.
- Ensure the skin appears calm, non-peeling, and not erythematous before proceeding.
- After treatment, do not resume retinoids for at least 14 days

8. Pregnancy and breastfeeding
9. Skin cancers or precancerous lesions
10. Recent sunburn or tanning

Precautions

- Avoid use around the eyes and lips.
- Depending on skin type, mild irritation may last up to 3 days.
- Exfoliation may occur approximately 2 to 3 days after the treatment.

Treatments

Protocol

- Recommended Frequency: Once every 3–4 weeks
- Approximate Intensity: Equivalent to ~1.0 mm microneedle stimulation
- Step-by-Step Procedure:

1	Cleansing	Cleanse thoroughly with Skin Defender Lip & Eye Makeup Remover and Snow O ₂ Cleanser	
2	Pre-Treatment	Apply EZ CO ₂ Mask for 10–15 minutes to prepare skin	
3	Main Treatment	Apply 1 syringe (3 ml) of Bio-Meso PDRN Expert Ampoule 60000 evenly on the face.	
4	Pressure Insertion	Press gently with palms for 20–25 seconds to embed spicules.	
5	Rolling Massage	Lightly massage for 20–30 seconds to enhance absorption.	
6	Optional Intensive Step	Apply Hydro Soothing Cream and continue massaging for 2–3 minutes.	
7	Mask Application	Apply Skin Reboot PDRN Mask Pack (10–15 min) or Bio Ferment Age-Defying Mask (20 min for sensitive skin).	
8	Finishing	Apply Soothing Repair Post Cream and Skin Rescue Overnight Cream Mask followed by Multi Sun Cream or Ultra Shield Sun Cream.	

Treatments

Post-treatment guidelines:

Extra care for at least 1 week

Sun protection

7 days

Hydration and barrier repair

5~7 days

Do not scrub or exfoliate

3~5 days

Avoid active ingredients

2~3 days

No sauna, steam room, or intense exercise

1~3 days

Mild tingling or pricking is normal

Ongoing care required

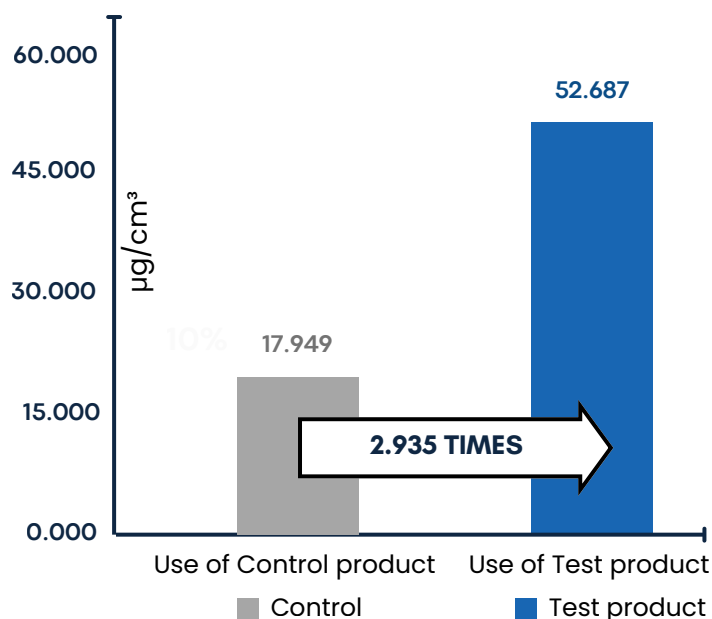

Follow the recommended home care regimen

* Use GENOSYS Skin Reboot PDRN Mask Pack, Soothing Repair Postcream, Skin. Rescue Overnight Cream Mask
